

Dear Admissions and Scholarship Committee,

It is great to be invited to the final part of the selection process for the Full Stack Development Internship at Annamalai University. I am Diyorbek G'anijonov from Tashkent State University of Economics while freelancing as a Full Stack Developer, and am 18 years old. I am motivated to bridge my academic background in economics and my professional passion for software engineering.

My journey in development is focused on learning modern and scalable technologies. I've spent a lot of time improving my skills in React, TypeScript, and Tailwind CSS to create user-friendly front-end applications, along with a strong knowledge of SQL for managing data effectively. My current project ecotaxta.uz shows that I can manage the full development process from designing responsive interfaces to building complex logic and database systems.

I am especially interested in this internship at FEAT because of your department's strong reputation for technical excellence. My main goal is to move from working independently to collaborating in a professional team environment. I am eager to learn from your faculty mentors, particularly about best practices in software architecture and improving full-stack systems within a structured team.

Besides my technical skills, my studies at TSUE give me a unique perspective. I see technology in terms of economic efficiency and user value, which helps me build tools that are not only functional but also practical and useful in real life. I am very motivated to bring this mindset to your next cohort and to grow alongside the engineers at Annamalai University.

Thank you for your time and for considering my application. I look forward to the opportunity to contribute to the Faculty of Engineering and Technology.

Sincerely,

Diyorbek
